E-DigiPass

Instruction for Private Individuals

REGISTRATION STEP

E-DigiPass registration can be completed on the web version of Internet Banking by going to My profile › Devices › Add e-DigiPass.

ელექტრონული დიჯიპასის დამატება   ← უკან

When the e-DigiPass is added, the user will receive a 10-digit activation code and a 4-digit PIN code. The 10-digit activation code is used once for activating the e-DigiPass, and the 4-digit PIN code is needed for every transfer to generate a one-time TAN code using the e-DigiPass.

The codes will be sent in two separate messages to the email address or phone number linked to your Internet Banking account.

You can change the 4-digit PIN code from the Mobile Banking menu by navigating to My profile -› E-DigiPasses -› PIN code change.
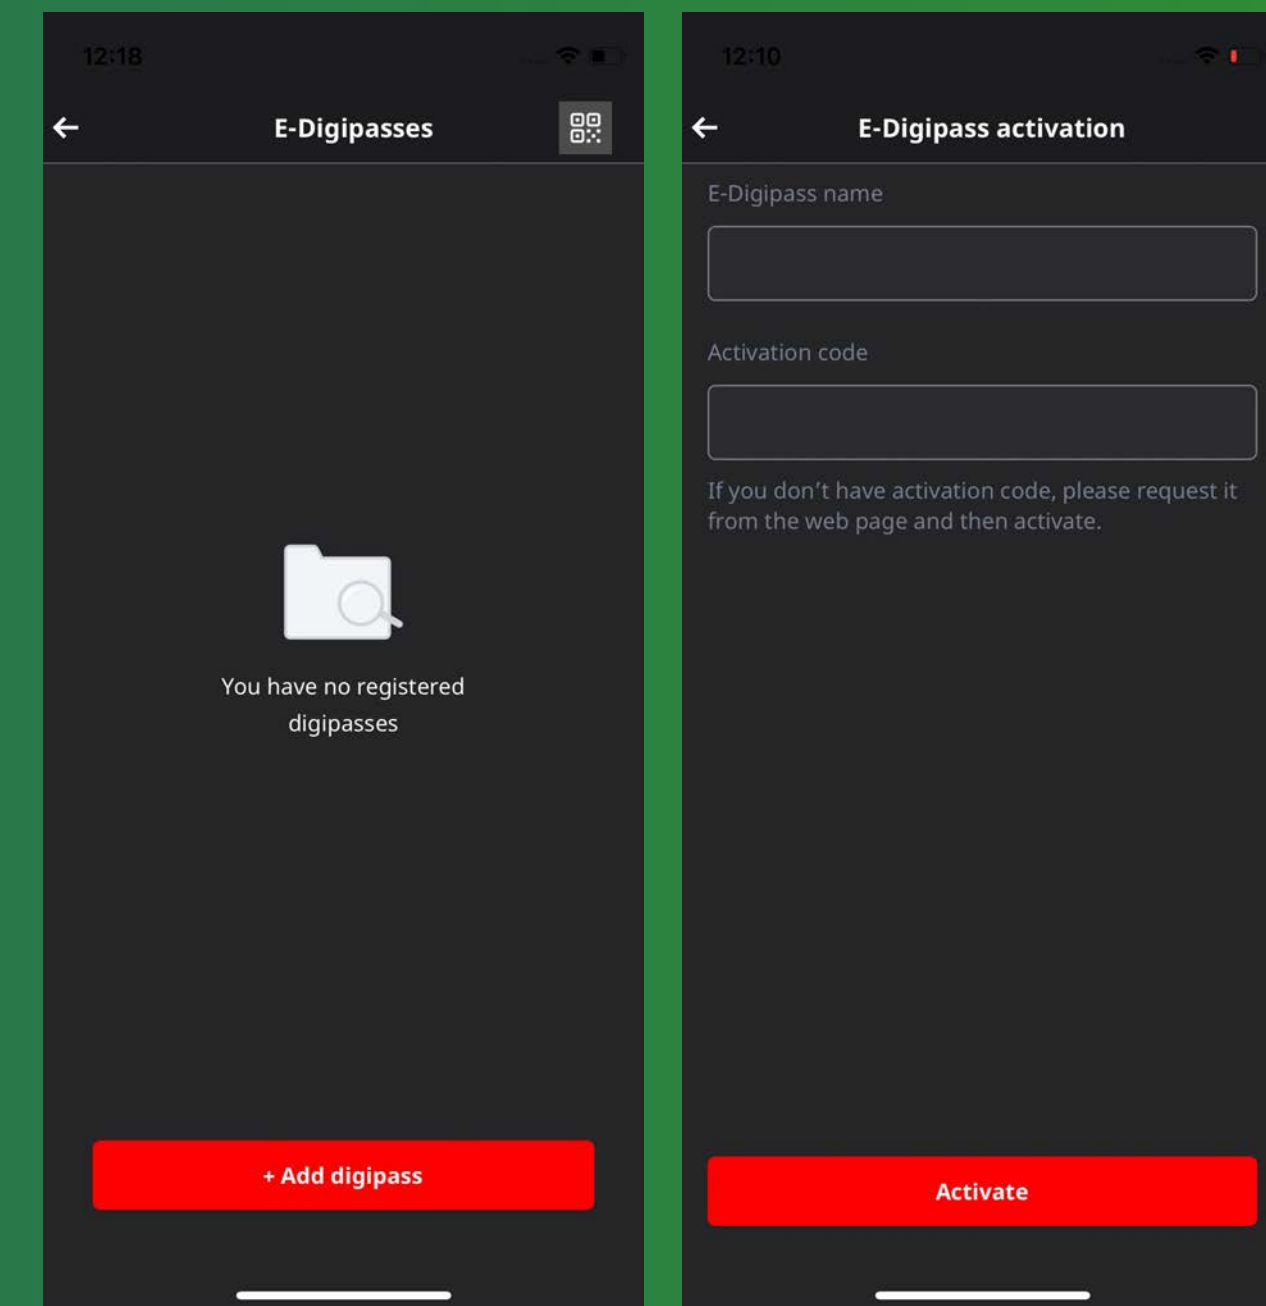

ACTIVATION STEP

E-DigiPass can be activated from the Mobile Banking app's home page (Login Page) by selecting E-DigiPasses in the menu.
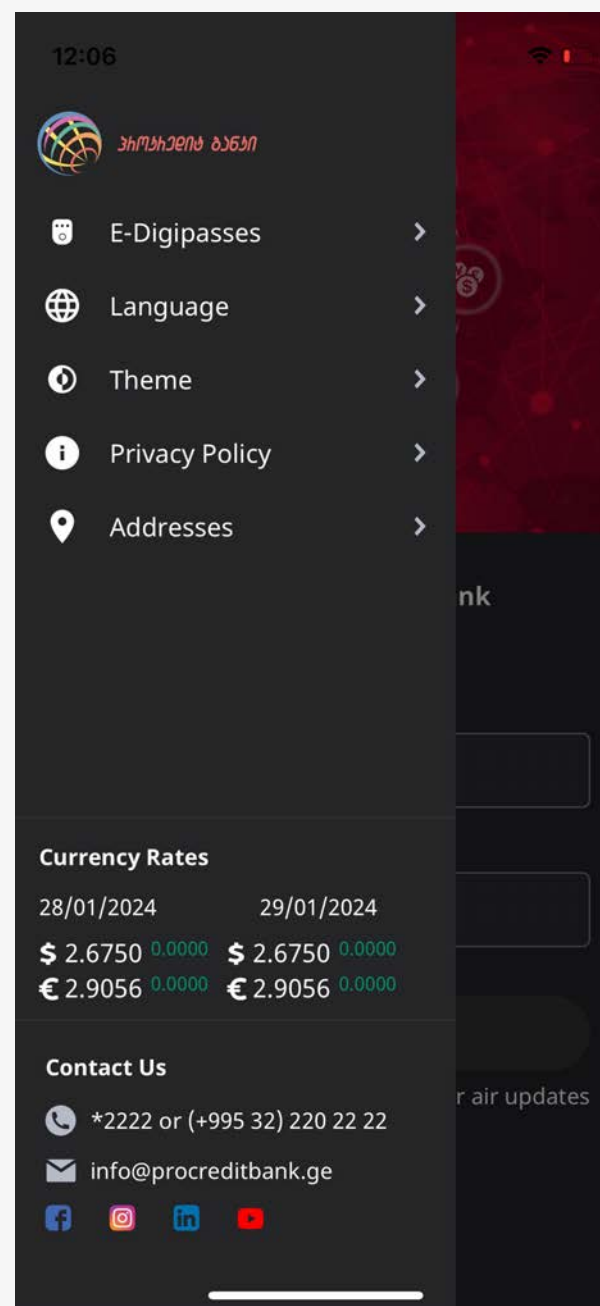

To complete the activation, you need to provide the desired name for the DigiPass to be registered in the E-DigiPasses menu and enter the 10-digit registration code in the corresponding field.

E-DIGIPASS UPDATE

The mobile token can be replaced with an updated e-DigiPass from the Internet Banking menu by clicking the appropriate update button (Figure 4). To do this, go to My profile -› Devices -› All devices.

You can change the 4-digit PIN code from the Mobile Banking menu by navigating to My profile -› E-DigiPasses -› PIN code change.
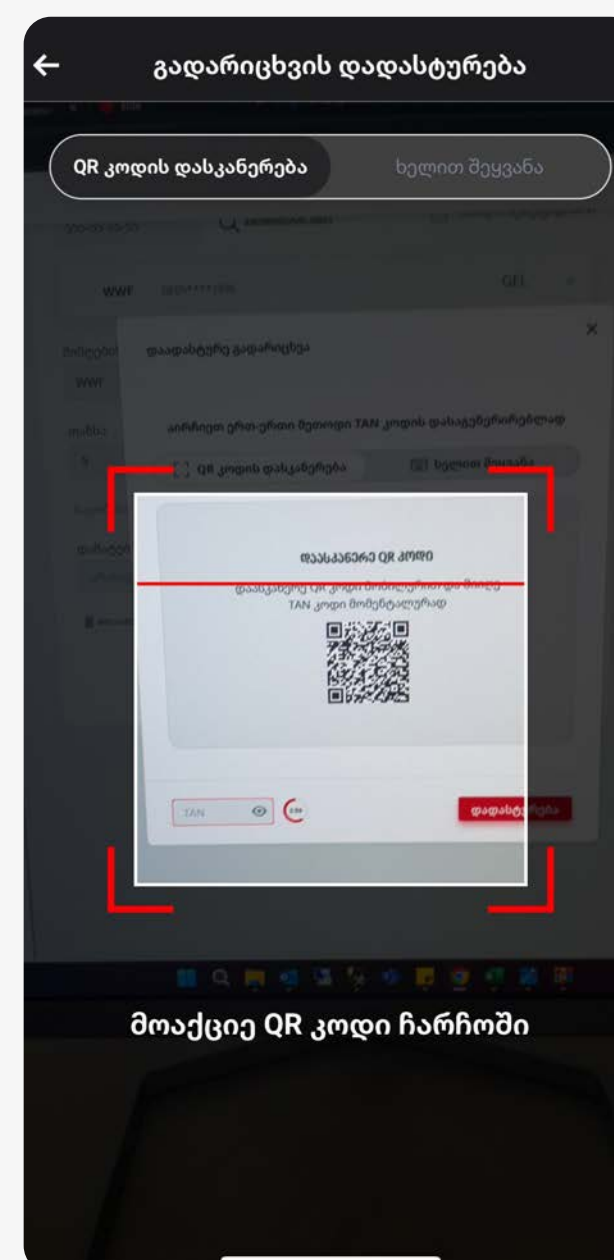

CONFIRMING TRANSACTIONS WITH E-DIGIPASS BY SCANNING A QR CODE IN INTERNET BANKING

To authorize a transfer registered in Internet Banking, you must scan the QR code displayed in the confirmation window. You can scan it directly using your mobile phone camera or through the e-DigiPass menu.

Once the camera activates, the QR code will be scanned, directing the user to the e-DigiPass page. After entering the 4-digit PIN, a one-time TAN code will be generated automatically.

You can also scan the QR code from the e-DigiPass page by clicking the QR code icon in the top right corner.

CONFIRMING TRANSACTIONS WITH E-DIGIPASS WITHOUT SCANNING A QR CODE IN INTERNET BANKING

Transfer confirmation can also be done without scanning the QR code, by entering it manually.

For manual data entry, the user must enter the transfer type, the last four digits of the account number, and the amount via the e-DigiPass menu.
